Managed services

Create the virtual machine at your image

Cloud DataCenter is an automated solution that can be fully modular and customized from our business interface, allowing you to deploy one or more virtual machine(s) in just a few minutes. Each created VM is unique, and can be configured by the administrator, who relies on the availability of resources, specific to each business need.

Managed services

We operate critical applications on a daily basis, and guarantee the confidentiality, integrity and sustainability of sensitive data. We ensure the global administration of platforms (OS application servers, CMS and databases, security) within the framework of a service agreement framed by commitments.
